Table B.2: All female C57BL/6 mice exposed during dose and dose-rate investigations. Mice were exposed to 0.5, 1 or 2 Gy (along with sham exposed mice) at either 0.3 or 0.063 Gy/min and sacrificed at either 4 or 24 hours post-exposure. Mean number of 53BP1 foci/cell were calculated and analysed within both the central and peripheral region of the lens epithelium.

**Table B.3: Mean percentage Ki67 positive LECs in mice exposed during dose and dose-rate investigations.**

*Table B.3: Mean percentage Ki67 positive LECs in mice exposed during dose and dose-rate investigations. Mice were exposed to 0.5, 1 or 2 Gy (along with sham exposed mice) at either 0.3 or 0.063 Gy/min and sacrificed at either 4 or 24 hours post-exposure. Percentage (%) of Ki67 were calculated and analysed within both the central and peripheral region of the lens epithelium.*
